AstaWashe

Smart Healthcare Starts With Every Dose

Now, Everyone Can Hear It

AI-Powered, Audio-First Medication Reminder & Health Assistance Platform

Built audio-first — so no patient is left behind by what they can or can't see.

Not just a reminder system.
A smarter, more accessible future for healthcare.

INSA SUMMER CAMP PI | 2026

The Problem No One Else Is Solving

5M+
Ethiopians with chronic illness

38,000+
Health Extension Workers

24/7
Support

Every medication app on the market assumes you can read a screen.

50%
of patients forget their medications

Blind and low-vision patients
can't read app notifications or SMS text — today's "smart" reminders simply don't reach them.

Elderly & low-literacy patients
face the same barrier — screens and small text exclude the people who need reminders most.

Missed doses go undetected
until a crisis, because these patients have no accessible way to confirm they took their medication.

No Ethiopian tool is audio-first
existing platforms bolt on accessibility as an afterthought, if at all.

The Problem

5M+
Ethiopians with chronic illness

38,000+
Health Extension Workers

30%
Potential drop-out reduction

50%
of patients forget their medications

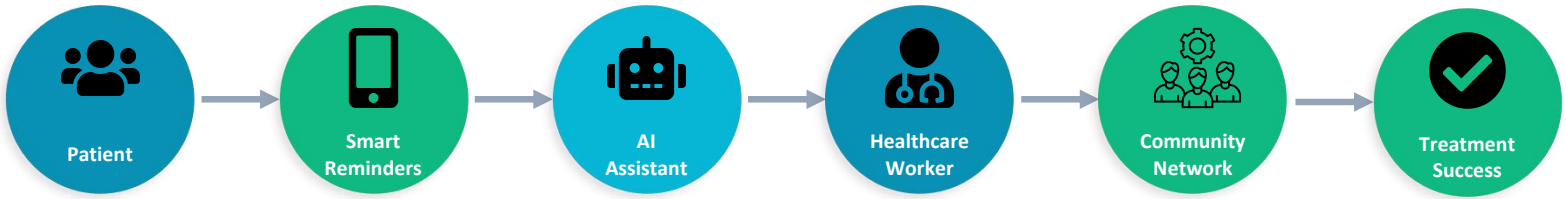

- In Ethiopia Patients with TB, HIV, and chronic illnesses miss critical doses
- Healthcare workers waste hours making manual reminder calls
- Missed medications lead to treatment failure and preventable deaths
- No centralized system to track patient adherence in Ethiopia

The Result: *Treatment drop-out rates in Ethiopia exceed **30%** for chronic illnesses. Lives are lost because of missed doses.*

Our Solution

AstaWashe

A comprehensive AI-powered platform that eliminates the friction between patients, healthcare workers, and doctors.

One platform. Zero missed doses. Lives saved.

Core Features

Audio-First Accessibility

Spoken reminders and a voice-driven AI chat for blind, low-vision, and low-literacy patients

AI Health Assistant

24/7 multilingual chatbot for health questions & support

Smart Medication Reminders

Automated SMS & push notifications at scheduled times

Doctor-Patient Link

Direct communication channel for check-ups & advice

Guardian Alerts

Family members notified when 3 consecutive doses are missed

Multi-Language Support

Amharic, English, Oromiffa, Tigrigna, Somali

Community Network

where patients with similar diseases can connect, share experiences

Adherence Tracking

Real-time dashboard showing patient compliance status

Target Users

AstaWashe Smart Medication Reminder System

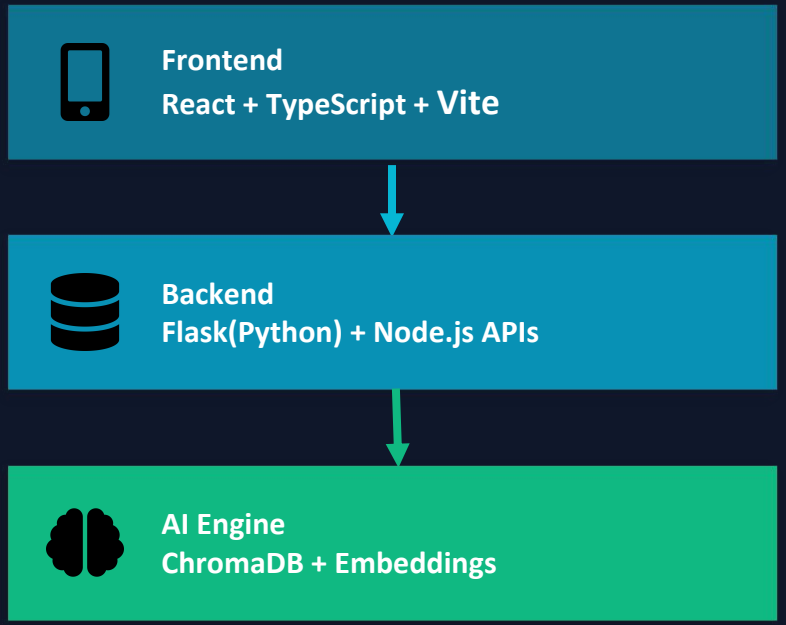

Blind & Low-Vision Patients
Reached by voice — not left out because they can't read a screen

Elderly Patients

Doctors & Healthcare Professionals
Need to monitor patient adherence

Hospitals & Clinics
Need digital patient management tools

Chronic Disease Patients
Patients with diabetes, hypertension, HIV, TB, asthma

The only system in Ethiopia combining medication tracking with AI healthcare support

Technical Architecture

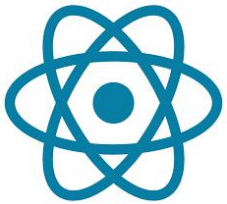

Dual-Server Architecture

Server 1: Core Backend

- Patient management
- Reminder scheduling
- SMS/notification APIs
- Adherence tracking

Server 2: AI Services

- AI health assistant
- ChromaDB vector store
- Habit Analyse
- Smart recommendations
- RAG Architecture
- Natural Language Processing

React | TypeScript | Python | Node.js | ChromaDB | REST APIs

Scalable, modular architecture designed for production deployment

Real-World Impact

Meet Tigist, 34, Addis Ababa *Living with Type 2 Diabetes*

Living with Type 2 Diabetes, struggles to remember her daily medication

8:00 AM	AstaWashe sends an SMS + push reminder
8:05 AM	Tigist takes medication, replies 'YES'
Real-time	Doctor sees green ✓ on dashboard
Evening	AI assistant answers her question about diet
3 days later	Appointment reminder sent automatically

Result: 100% medication adherence. Zero missed appointments. Better health outcomes.

Real-World Impact

Alemu, 58 — Bahir Dar *Blind, living with hypertension*

Living with Type 2 Diabetes, struggles to remember her daily medication

8:00 AM	AstaWashe speaks: "Your medication time is here"
8:05 AM	Alemu confirms by voice — no screen needed
Real-time	Doctor sees green ✓ on dashboard same as any patient
Evening	AI assistant answers his question about diet
3 days later	Appointment reminder sent automatically

Result: 100% medication adherence. Zero missed appointments. Better health outcomes.
for every patient, whether they read a screen or not.

Impact & Scalability

5M+
Ethiopians with chronic illness

38,000+
Health Extension Workers

30%
Potential drop-out reduction

Future Expansion

Phase 1 — **National Hospital Integration**
Deploy in major hospitals • Government health system API

Phase 2 — **Rural Access**
USSD/SMS-only mode • Zero-internet functionality

Phase 3 — **Advanced AI**
Predictive health analytics • Automated doctor referrals

Phase 4 — **Cross Platform Mobile Application**
Works well with every mobile users, for better accessibility.

Vision: Become the standard digital health platform across Ethiopia and East Africa

Thank ya

Smart healthcare, for every patient — heard, not just seen.
